

Henrique Cardoso de Faria

SUMMARY

I became a programming lover on college, when I decided to dedicate my professional life to this. Since then, I dedicate my life on learning and developing new skills every day. It is not only about software development, it is all about creating the best possible experience to the users, and to the creators either, so that is why dedicating to learn design patterns and good practices is so important. Besides that, I am a husband, father and love my family and friends.

SKILLS
